

Sister Agnes Oleander
Nerium oleander 'Sister Agnes'

Height: 15 feet

Spread: 15 feet

Sunlight:

Hardiness Zone: 8b

Other Names: Rose Bay

Description:

A popular shrub or small tree, producing snowy white flower clusters over deep green contrasting foliage; often used as a patio plant; pruning required to maintain strong structure; parts of this plant are known to be toxic

Ornamental Features

Sister Agnes Oleander features showy clusters of white star-shaped flowers at the ends of the branches from early to late summer. It has dark green evergreen foliage which emerges light green in spring. The narrow leaves remain dark green throughout the winter.

Landscape Attributes

Sister Agnes Oleander is a multi-stemmed evergreen shrub with an upright spreading habit of growth. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a high maintenance shrub that will require regular care and upkeep, and can be pruned at anytime. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Insects

Sister Agnes Oleander is recommended for the following landscape applications;

Planting & Growing

Sister Agnes Oleander will grow to be about 15 feet tall at maturity, with a spread of 15 feet. It tends to be a little leggy, with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 20 years.

This shrub does best in full sun to partial shade. It is very adaptable to both dry and moist locations, and should do just fine under average home landscape conditions. It is considered to be drought-tolerant, and thus makes an ideal choice for xeriscaping or the moisture-conserving landscape. It is not particular as to soil pH, but grows best in poor soils, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America, and parts of it are known to be toxic to humans and animals, so care should be exercised in planting it around children and pets.
